AICTE Complaint Monitor (PS 26264)

Official Screen Recording Script — **Target Duration: 4 Min 30 Sec**

PRE-FLIGHT SETUP (Before you hit record):

- **Left Window**: Web Browser on http://localhost:5173/login
- **Right Window**: Mobile Screen mirrored with Expo Go open (or phone screen capture).
- **Demo Password for all accounts**: Demo@1234 (supervisor, kulkarni, management, admin).
- **Hero Institution**: *Sahyadri Institute of Technology* (Code: INST-MH-001).

SCENE 1 | Problem Statement & Solution Context

0:00 – 0:30 (30s)

■■ WHAT TO SHOW (ACTIONS ON SCREEN):

Show the web login page (http://localhost:5173/login). Hover mouse over title: 'Every complaint. One institution. All bureaus.'

■■ WHAT TO SAY (EXACT VOICEOVER SCRIPT):

"Hello everyone. Today, I'm presenting our solution for AICTE Problem Statement 26264: an Integrated Dashboard for Monitoring and Tracking Institution-Related Complaints Across AICTE Bureaus and Cells.

Previously, AICTE bureaus—like Regulation, Approval, and Grievance Cells—handled complaints in silos. Cases concerning the exact same institution were often processed concurrently without coordination, causing duplicate work and delays.

We solved this with an end-to-end platform: a citizen mobile app for verified complaint filing, combined with a central dashboard featuring automated overlap detection, real-time workload tracking, and strict role-based access."

SCENE 2 | Citizen Mobile App: Email OTP Auth, Geotag & Filing

0:30 – 1:30 (60s)

■■ WHAT TO SHOW (ACTIONS ON SCREEN):

1. Focus on Mobile Screen. Enter email → Tap 'Send Code' → enter 6-digit OTP → Tap 'Verify'.
2. Tap 'File New Complaint' → Pick 'Sahyadri Institute of Technology' → Category 'Infrastructure' → Subject: Severe electronics lab equipment malfunction.
3. Tap 'Add Geotagged Photo' → snap photo (highlight captured GPS coordinates & address).
4. Tap 'Attach Document' (pick sample PDF) → Check 'Urgent Priority' → Tap 'Submit'.
5. Switch to 'Track Complaint' tab, show live status & timeline with Case ID.

■■ WHAT TO SAY (EXACT VOICEOVER SCRIPT):

"We start with the citizen mobile app, built with React Native and Expo SDK 58.

To eliminate spam, complaints require passwordless email OTP verification via Resend. Once verified, the complainant selects the institution and enters their grievance.

For tamper-proof evidence, with one tap the app captures a geotagged photo—automatically embedding real-time GPS coordinates and the reverse-geocoded physical address onto the record. We also support PDF attachments and an 'Urgent Priority' flag.

Once submitted, the backend auto-routes the case to the appropriate bureau and generates a tracking ID. On the 'Track Complaint' tab, citizens can monitor live progress, handling bureau, and action timeline anytime."

SCENE 3 | Web Portal & Centralized Institution Profile

1:30 – 2:15 (45s)

■■ WHAT TO SHOW (ACTIONS ON SCREEN):

1. Switch to Web Browser (http://localhost:5173/login).
2. Click 'Supervisor' demo login (supervisor / Demo@1234).
*3. Point out top bar: **no manual 'Register' button** for staff (data comes strictly from citizen channels).*
4. Click 'Institutions' → open 'Sahyadri Institute of Technology' (INST-MH-001).

■■ WHAT TO SAY (EXACT VOICEOVER SCRIPT):

"Now switching to the AICTE web portal as a Supervisor.

Notice our security design: administrative staff cannot manually register complaints here. All public cases originate exclusively from verified citizen channels, preserving complete data integrity.

Opening 'Institutions' → 'Sahyadri Institute of Technology', we see the Centralized Institution Profile mandated by the problem statement. In one single window, officers see the AICTE Permanent Code, state, affiliating body, and a consolidated history of all past and ongoing complaints across all AICTE bureaus."

SCENE 4 | Cross-Bureau Overlap Detection, Scoping & Linking

2:15 – 3:15 (60s)

■■ WHAT TO SHOW (ACTIONS ON SCREEN):

1. Click 'Related cases' (/overlaps).
*2. Point out warning banner: **'■■ Potential Overlapping Cases – Coordination Required'**.*
3. Show match score (78%) and the 4 signals: Same institution, similar text topics, close in time, different bureaus.
*4. Sign out & log in as Technical Officer (kulkarni): show other bureau case is **redacted**.*
5. Log back in as Supervisor → Click 'Link cases' → reason: 'Same lab issue; joint inspection required' → Confirm.

■■ WHAT TO SAY (EXACT VOICEOVER SCRIPT):

"Here is our core innovation: Cross-Bureau Overlap Detection.

Notice this warning banner: 'Potential Overlapping Cases – Coordination Required'. Our engine automatically flags when multiple bureaus are independently processing complaints for the same institution.

It's completely explainable—combining institution ID matching, category correlation, a 60-day window, and TF-IDF text similarity with a technical synonym dictionary.

Security is enforced at the database level: when logged in as a specific Bureau Officer like Mr. Kulkarni, another bureau's text is automatically redacted to prevent privacy leaks. A supervisor can review both sides, enter an audited rationale, and link the cases for joint action."

SCENE 5 | Real-Time Monitoring Dashboard & Analytics

3:15 – 4:00 (45s)

■■ WHAT TO SHOW (ACTIONS ON SCREEN):

1. Click 'Dashboard' (/).
2. Point to KPI cards: Overdue, Due soon, Under process, Transferred, Overlaps.
3. Scroll to 'Who is holding what' (Bureau Lanes): hover over colored SLA dots (red=overdue, orange=due soon, black=on track).
4. Point to monthly intake vs. disposal area chart, status pie chart, and officer workload.

■■ WHAT TO SAY (EXACT VOICEOVER SCRIPT):

"On the executive Dashboard, authorized officials have complete visibility.

At the top, we display all key metrics from the problem statement: total complaints received, pending cases, cases under process, cases transferred between bureaus, and cases disposed.

Our 'Who is holding what' Lanes visually partition active workload across bureaus. Each dot represents a live case, color-coded by SLA deadline health—red for overdue, orange for due soon, and black for on track.

Officials can also track monthly intake vs. disposal trends, status breakdowns, case ageing from 0 to 30-plus days, and individual officer workloads."

SCENE 6 | Search, Regional Filters, Alerts & Conclusion

4:00 – 4:35 (35s)

■■ WHAT TO SHOW (ACTIONS ON SCREEN):

1. Click 'Cases' (/cases): pick Region dropdown → 'Maharashtra'.
2. Click 'Reports' (/reports): show 'By region / state' chart and click 'Export CSV'.
3. Click 'Audit' (/audit): show immutable audit trail.
4. Toggle Light/Dark mode in the top right to end on the polished dashboard view.

■■ WHAT TO SAY (EXACT VOICEOVER SCRIPT):

"Finally, under 'Cases' and 'Reports', users can filter by Bureau, Category, Status, and State or Region, and export sanitized CSV or JSON reports.

Behind the scenes, configurable routing sends ambiguous cases to a manual review queue, deduplicated SLA alerts prevent notification spam, and every single action is permanently recorded in an immutable audit trail.

Our platform directly fulfills all requirements of AICTE Problem Statement 26264—bringing transparency, coordination, and accountability across all AICTE bureaus.

Thank you!"
